

Cal OES Daily Situation Report

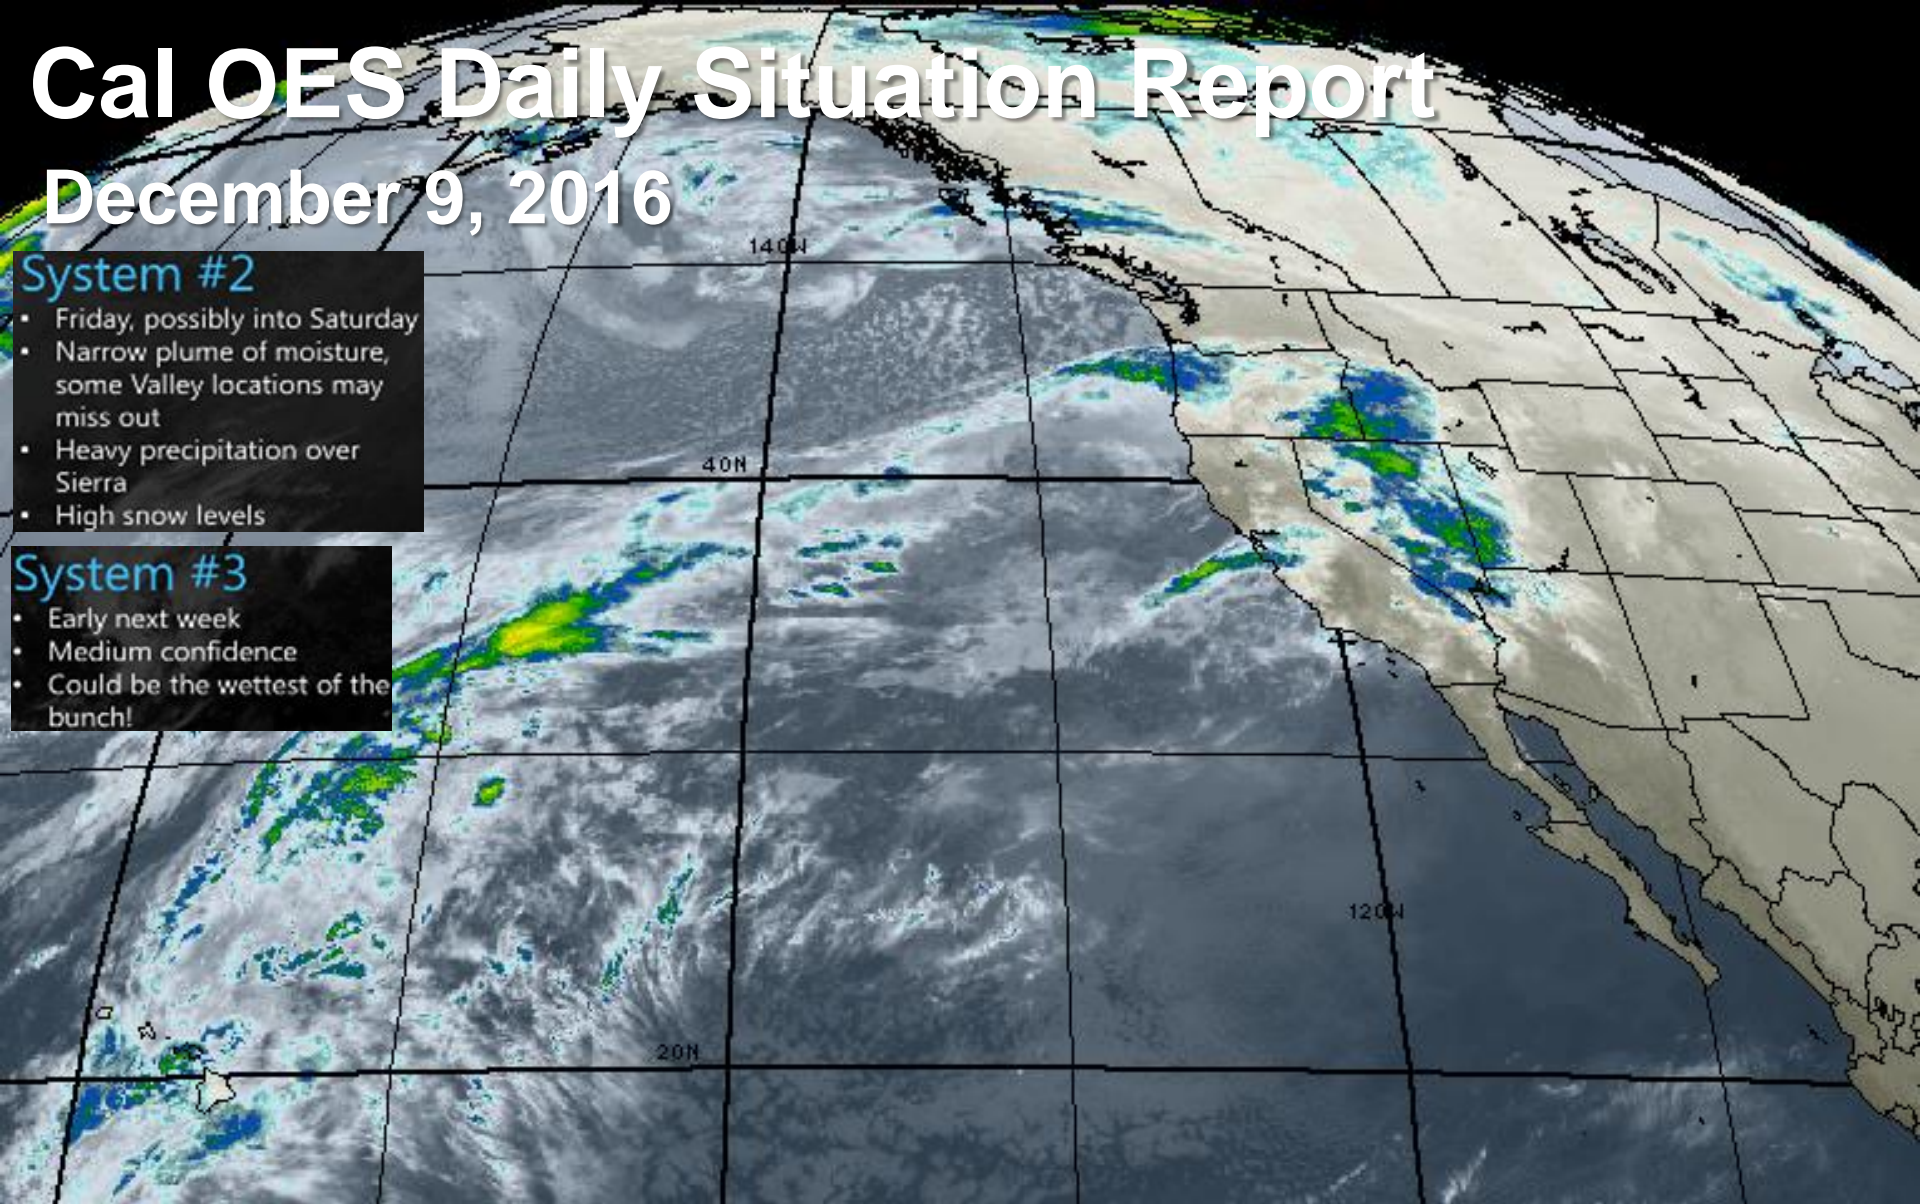

December 9, 2016

System #2

- Friday, possibly into Saturday
- Narrow plume of moisture, some Valley locations may miss out
- Heavy precipitation over Sierra
- High snow levels

System #3

- Early next week
- Medium confidence
- Could be the wettest of the bunch!

The first of three systems has passed. The second and third will impact California into next week.

- None reported.

WEATHER OF CONCERN

Weather of Concern

- A wet and cold pattern will continue for portions of Northern California. Rain is expected in the San Joaquin Valley and Foothills and the Sierra Nevada will also see periods of snow in through Saturday. In addition to the snow, winds are also expected to gust between 20 to 30 miles per hour which could cause possible periods of whiteout conditions.
- There will be a series of weak wet weather systems rotating through Southern California bringing strong winds to the mountains and high desert through the weekend. Storm total rainfall amounts now expected to range between 0.50 and 1.50 inches across much of San Luis Obispo County, except 1.5 to 2.5 inches for foothill and northern coastal areas, including the Chimney Burn area. Rainfall amounts across Santa Barbara county are generally expected to range between 0.10 and 0.50 inches.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

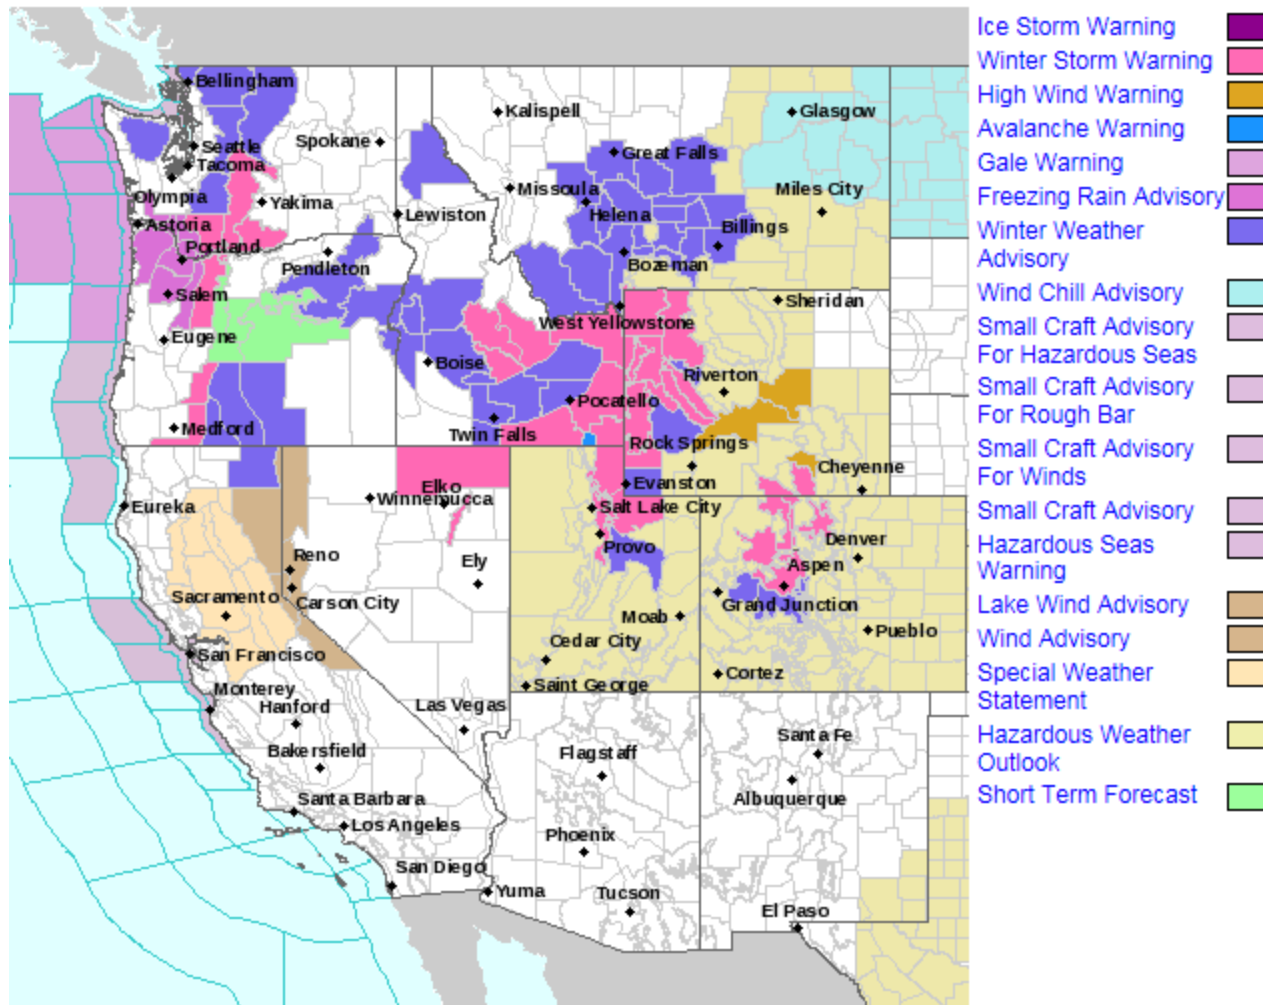

Moist zonal flow continues over the western U.S. A short wave within this zonal flow is bringing a few light showers over the Sierra and foothills at this time. Snow levels are quite high at above 8000 feet due to warm advection ahead of a weak front now just off the coast. Some fog has formed in the central valley this morning but extensive cloud cover should keep this from becoming significantly dense. The weak system moving through the north state today will bring continued periods of precipitation. Snow levels should remain mainly above pass levels. Therefore, impacts should remain relatively minor today. A more significant disturbance is expected to move through the region on Saturday continuing the wet weather pattern. Overall precipitation totals in the valley will stay fairly low but orographics over the Sierra will bring moderate precipitation there. Again, snow levels should remain above pass levels so impacts will be limited.

SOUTHERN CALIFORNIA

An unsettled pattern is expected through the weekend. With the moist northwest flow pattern, a couple of distinct bands of rainfall are expected across San Luis Obispo and Santa Barbara counties (Late this afternoon/evening and again late Saturday afternoon/evening) with scattered showers possible in between the bands. For Ventura and Los Angeles counties, the bands of steady precipitation will dissipate before impacting these areas. However, there will be enough moisture and lift to generate the possibility of showers this morning and again Saturday night/Sunday morning.
